BALANCE keyboard

The perfect partner. The perfect fit.

Balance Keyboard was made for you and the way you work. Specifically designed to fit RollerMouse Red, Red plus, and Free2, the Balance Keyboard puts your hands in the perfect typing and mousing position.

Comfort is key. Designed specifically for use with our award winning RollerMouse family, you'll be in an improved, stress-free position while getting the most out of your keyboard and mouse. Your hands stay closer to the action and within reach of both the rollerbar and keyboard keys.

Increased functionality at hand. The Balance Keyboard's media keys perform useful everyday tasks and can be programmed to suit your specific needs (Mac only). Traditional function keys (F1-F12) are also available, and the Fn lock feature makes them readily available when needed.

Power and freedom. It's time to cut the cord. The Balance Keyboard is wireless and runs on 2 AAA batteries. It connects to your PC or Mac by using its own USB wireless receiver.

The Balance Keyboard's adjustable legs and tilt options allow for negative, neutral, and positive typing angles.

This small, wireless receiver can be securely stored in the magnetized battery housing when not in use.

The low profile keys are offered in two layouts, Pan-Nordic and English. Scissor switch mechanisms provide a nice tactile feeling when typing.
