

Magic Dock

For SocketScan and DuraScan Data Readers

Magic Dock is a dock-based charging and connectivity solution designed for shared workstation environments. It gives compatible Socket Mobile Bluetooth LE scanners a permanent home on the counter, helping keep devices charged, connected, and ready for immediate use throughout the workday.

Built for retail checkout counters, healthcare nurse stations, hospitality front desks, warehouse receiving stations, and other shared scanning environments, Magic Dock combines charging, scanner storage, and scan-to-connect technology into a single workstation-ready solution.

Currently available as part of select Socket Mobile scanner bundles.

A Permanent Home for Cordless Scanning

Cordless scanners provide the flexibility businesses need, but in shared workstation environments they can create new challenges. Devices get moved between employees, misplaced between shifts, or left uncharged when they are needed most.

Magic Dock gives compatible Socket Mobile scanners a dedicated home on the counter, helping ensure scanners remain organized, charged, and ready for immediate use throughout the day.

Simple Setup. Everyday Reliability.

Magic Dock is designed to simplify scanner deployment and day-to-day operation.

Compatible scanners can be connected using a simple scan-to-connect process that eliminates traditional Bluetooth pairing steps. Once connected, scanned data is delivered directly into the active application, supporting both standard keyboard-style input and enhanced data capture through CaptureSDK-enabled applications.

The result is a cordless scanning experience that is easy to deploy, simple for employees to use, and consistent across shifts and workstations.

Built for Shared Workstation Environments

Magic Dock is designed for environments where scanners are shared across employees, counters, and shifts throughout the day.

Common deployment environments include:

- Retail checkout counters
- Healthcare nurse stations
- Hospitality front desks
- Warehouse receiving stations
- Shared point-of-sale workstations
- Multi-shift operations

By keeping scanners docked, charged, and always within reach, Magic Dock helps reduce interruptions while supporting a more organized scanning workflow.

Works with SM Link

Magic Dock and [SM Link](#) are designed to support different deployment models while sharing the same goal: simplifying cordless scanning.

Magic Dock is ideal for fixed workstation environments where scanners benefit from a permanent charging and connectivity location.

SM Link is designed for portable workflows where scanners move between computers, tablets, and operating systems.

Together, they help businesses standardize cordless scanning across both fixed and mobile environments while supporting a wide range of business applications and devices.

Compatible with the following products:

- [SocketScan S721](#)
- [SocketScan S741](#)

Features

- **Permanent Scanner Home:** Provides compatible scanners with a dedicated workstation location that helps keep devices organized, charged, and always within reach.
- **Charging and Connectivity:** Combines scanner charging, storage, and scan-to-connect technology into a single workstation-ready solution.
- **Scan-to-Connect Setup:** Pair scanners quickly by scanning a barcode, eliminating manual Bluetooth configuration
- **Shared Workstation Ready:** Designed for environments where scanners are used by multiple employees across shifts and workstations.

- **Cordless Flexibility:** Maintains the mobility benefits of cordless scanning while supporting fixed workstation deployments.
- **Broad Application Compatibility:** Delivers scanned data directly into active applications using standard keyboard-style input.
- **CaptureSDK Compatible:** Supports enhanced application integrations and advanced data capture capabilities.
- **Standardized Deployment:** Works alongside SM Link to help simplify deployment across multiple locations and workstation environments.
- **Built for Professional Workflows:** Ideal for retail, healthcare, hospitality, warehouse, and other shared scanning environments.
